

Dashboard Feature Specification

1. What the Feature Is

The dashboard is a personal summary page that gives users an overview of their cinema activity. It pulls together data from the watchlist and watch log to show stats, trends, and history in a single view. The dashboard is only available to signed-in users.

2. What Is Shown

The dashboard presents the following information:

- Total watched: the number of unique titles the user has logged.
- Movies vs shows: a breakdown of how many of those were movies and how many were TV shows.
- Watch streak: how many consecutive days the user has logged at least one watch.
- Watchlist size: the number of titles currently sitting in the Want to Watch list.
- Recently watched: a scrollable row of the 20 most recently logged titles.
- Genre breakdown: a ranked list of the genres the user watches most.
- Watchlist breakdown: a visual bar showing the proportion of watched vs want to watch titles.
- Activity heatmap: a calendar view showing how many titles were watched on each day over the past year.

3. Watch Streak

A watch streak counts how many days in a row the user has logged at least one title.

The streak is considered active if the user logged something today or yesterday.

The streak resets to zero if a full day passes with no log entry.

4. User Stories

- See a summary of all cinema activity at a glance.
- Track how consistently you are watching over time.
- Discover which genres you watch most.
- Browse recently watched titles from the dashboard.
- See how much of your watchlist has been completed.

5. Business Rules

- The dashboard is only accessible to signed-in users.
- Users who are not signed in see a prompt to log in instead.
- All data shown is specific to the signed-in user only.
- Average rating and total reviews show as empty until the ratings feature is built.

- Genre data only appears once genre information is being saved when items are logged.
